

SM-100 FLUSH PANEL SYSTEM

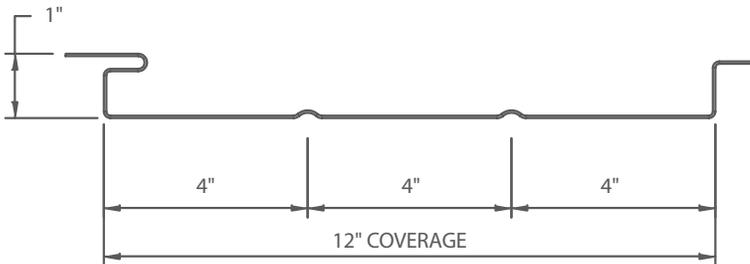

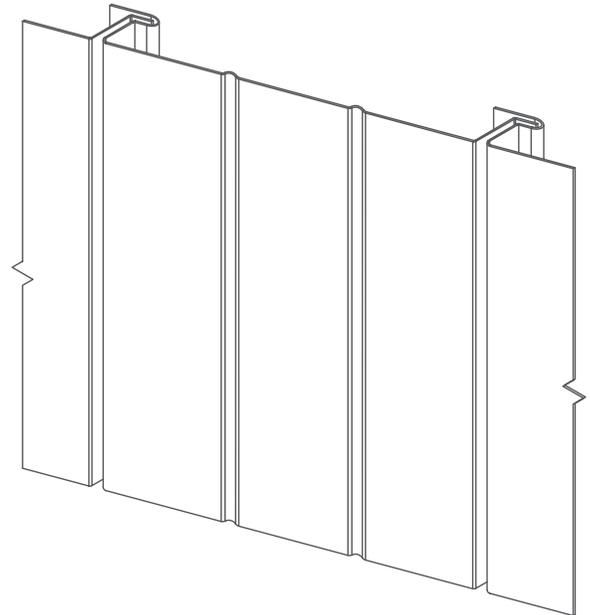

Spartan Metals offers a full line of commercial/ industrial wall panels that are available in a wide range of colors in a Kynar 500® paint finish. The Spartan Metals Series flush interlocking wall panel system provides consistently smooth wall surfaces. Unobtrusive vertical seams with concealed integral fasteners are secured without the need for additional clips or mechanical seaming. Optional stiffeners are recommended for lighter gauge material. The panels also may be designed in combination with insulation and liner panels to produce an insulated wall system.

Spartan Metals wall panels can be produced in both steel and aluminum, in a variety of thicknesses and gauges.
